

**Sustainable** innovation is growing.

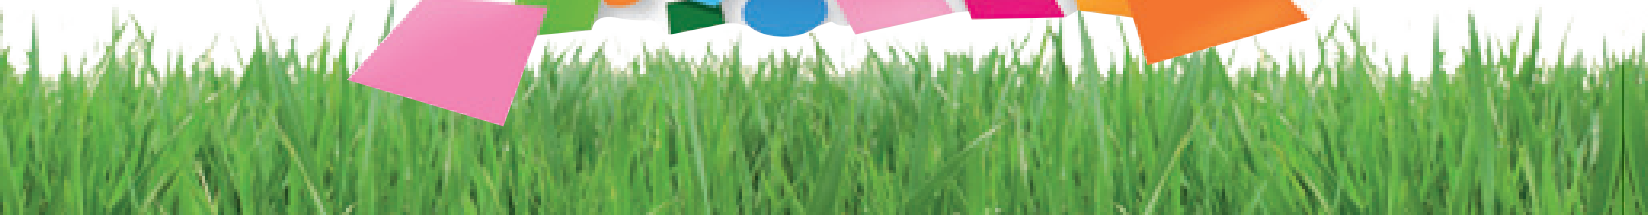

Beyond the limits of **flexo printing**.

Since 1969 we have been offering our Customers the leading edge pre-printing services, with expertise, enthusiasm and special concern for the environment.

better for you, better for the environment

# An entire process that is **sustainable.**

Ours is a structure that is **always at the cutting edge** of technological innovation. With the new **Kodak Flexcel NX** digital flexographic plates production system, we can comply with your high quality standards. We can help you to meet increasingly demanding markets and to reach your targets of environmental sustainability.

**Better printing resolution and quality, comparable to rotogravure.**

**Possibility to reproduce the entire range of tones, from 0.4% to 99%, up to 80 lines per cm.**

**Reduction of the number of colors, less set-up time, fewer interruptions.**

**Reduction in ink, solvents and discards, with a significant reduction in environmental impact.**

**Faster processing cycles, thanks to the Kodak technology.**

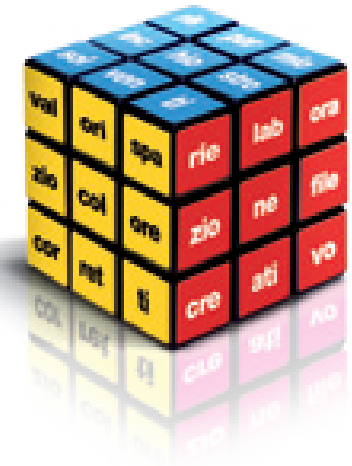

**Kodak** Flexcel NX  
Digital Flexographic System

# We provide **integrated solutions.**

The range of our services can be customized to meet your production and guarantee the best possible result.

## **Customer oriented**

We process and create graphic files, taking into account the critical aspects of flexographic printing. We produce and structure color profiles that are in line with all of the printing machine features.

## **Technical Department**

The technical department performs an assessment of the subject, together with the Customer, establishing the separation and number of colors required for achieving quality printing. Our knowledge of the materials, printing processes and careful analysis of all the variables in the production process enables us to meet all of the Customer's expectations.

## **Graphics Department**

The graphics department is equipped with fifteen workstations with paging up, tone and control programs dedicated to packaging (ART PRO). Our experts use the leading edge software, reducing processing time and ensuring correct carrying out of the printing artworks.

## **Mock-Up and Color Proofs**

We carry out our project mock-ups and packaging tests, trade fairs, photo shots, films, etc. Our proofs with screen, with the gmg color proof control system, are an exact preview of your packaging. We carry out screen proofs calibrated on every material being used.

i prodotti qui rappresentati sono stampati da: Inbalcenter, Scea, Italpolimeri, Capp-Plast.
